

The 5 Tiny Switches

5 immediate actions for steadier sugar,
reduced cravings, and better daily control.

1.

Sleep

Protect your
sleep.

2.

Meditation

Calm mind,
steady body.

3.

Soleus Push-ups

Simple seated
movement.
Helpful after meals.

4.

Meal Sequencing

Fiber first.
Protein next.
Carbs last.

5.

Grounding

Reconnect daily
with the Earth.

Blood Sugar Response

Steadier energy.
Better sugar response.

*Only for illustration purposes. Actual results may differ.

Small switches, repeated daily,
can support a steadier sugar response.

Poor sleep can raise hunger and sugar.

Better sleep makes hunger quieter and sugar response calmer.

POOR SLEEP

Loud hunger signals. Body is under stress.

Ghrelin

(Hunger Hormone)

Higher
hunger

Leptin

(Fullness Hormone)

Lower
fullness

VS.

BETTER SLEEP

Quieter hunger signals. Body is calmer.

Ghrelin

(Hunger Hormone)

Balanced
hunger

Leptin

(Fullness Hormone)

Better
fullness

CHAIN 1: HUNGER & CRAVINGS

Poor sleep

Hunger
signals rise

Cravings
increase

CHAIN 1: HUNGER & CRAVINGS

Better sleep

Hunger signals
are quieter

Cravings
reduce

CHAIN 2: STRESS & GLUCOSE

Poor sleep

Stress
rises

Liver may release
more glucose

CHAIN 2: STRESS & GLUCOSE

Better sleep

Body is
calmer

Steadier glucose
release

Better sleep makes hunger quieter and sugar response calmer.

Tonight's sleep routine

A few simple steps can protect better sleep.

1

Same bedtime

Go to bed at the same time, even on weekends.

Fixed time =
Better sleep

2

Dim the lights

Lower the lights to help your body wind down.

Dim lights =
Melatonin rises =
Sleep pressure builds

3

Phone away

Screen light can suppress melatonin release.

Phone away =
Melatonin protected

4

Cool dark room

Keep your room cool, dark and quiet.

Cool & dark =
Restful sleep

Protect 7+ hours like a prescription.

Meditation creates a pause.

That pause can make cravings easier to notice and resist.

Cravings can feel strong and urgent.

Inhale...

Exhale...

Stay. Breathe. Observe.

Create space between craving and action.

Meditation helps reduce cravings

1 Craving appears

The brain sends a craving signal.

2 Pause through breath

A mindful pause helps you notice without reacting.

3 Better choice

You choose what truly supports you.

Meditation helps reduce stress

Slow breath
Activates the calm response.

Body feels safe
Body feels relaxed.

Liver releases less sugar

The pause before the craving is where control begins.

How to meditate in 3 minutes

Sit. Breathe. Notice. Return.

1

Sit

Sit upright
comfortably.

A chair is fine.

2

Breathe

Watch the breath
as it flows.

No force.

3

Notice & Return

Mind may wander,
gently return to breath.

Return gently.

Start with
3 minutes daily.
Gradually increase
to 10 minutes.

Sit

Breathe

Notice

Return

Small daily pauses train a calmer response.

Your calf has a glucose-burning helper.

The soleus muscle can keep working while you sit.

Deep calf muscle

Uses blood glucose for energy

Works while sitting

A tiny muscle can do steady work for you.

How to do seated calf raises

Keep toes down and lift the heels.

1 Sit straight.

Feet flat on the floor, hips back in the chair.

2 Knees at 90 degrees.

Shins vertical, thighs parallel to the floor.

3 Toes stay down.

Press through your toes.

4 Lift heels, lower slowly.

Rise up on your toes, then lower with control.

Correct vs. Wrong

Correct

Toes down, heel rises.

Wrong

Whole foot lifting.

Best time:
60–90 minutes
after meals

Also during work,
reading or
watching TV.

Keep toes down. Lift heels. Repeat gently.

Same meal. Different sugar response.

Do not change the meal first. Just change the order.

Carbs first

1. Eat roti or rice first

Sugar rushes
in quickly

Fiber + protein first

1. Eat salad, vegetables, dal, paneer or curd first

Fiber acts
like a net,
slowing sugar
absorption

2. Then eat roti or rice

VS.

*Only for illustration purposes. Actual results may differ.

The same meal can behave differently.

The food order rule

Fiber first. Protein next. Carbs last.

1

Fiber first

Salad

Cucumber

Leafy vegetables

Vegetables

2

Protein next

Dal

Paneer

Curd

Pulses

Sprouts

3

Carbs last

Roti

Rice

Potatoes

Or fruit later

Change the order before changing the diet

1

Change the order

Use the food order rule

2

Keep the same meal

Don't change what you eat

3

See the difference

Better energy. Steadier sugar.

Change the order before changing everything.

Grounding can calm the body.

Connecting with the Earth can contribute to reduced inflammation.

20–30
minutes

Clean
natural
ground

Walking
or sitting

Early morning
is ideal.

Start with 20 minutes on clean, safe ground.

Protect diabetic feet first. Ground safely.

Safe actions

- 1 Inspect feet daily.

- 2 Choose clean grass or smooth, safe ground.

- 3 Wash and dry feet afterwards.

- 4 Stop if anything feels different or uncomfortable.

Avoid

- 1 Rough stones or sharp ground.

- 2 Walking with numbness.

- 3 Walking with wounds or cracks.

- 4 Walking with redness, swelling, or infection.

Healthy feet today, fewer complications tomorrow.
Check. Care. Protect.

One small action. Every day.

You do not need perfection. You just need rhythm.

Sleep well

Better sleep.
Less stress.

Meditation

Calm mind.
Reduced cravings.

Soleus pushups

Stronger calves.
Better balance.

Meal Sequencing

Fiber first.
Steady energy.

Grounding

Stand on ground.
Reset naturally.

Start with one switch today. Add the next tomorrow.

7-Day Tick Tracker

Print this sheet and track your actions *everyday*.
